DETAILED ACTION

Claim Rejections - 35 USC § 112

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claims 2 and 4 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claims 2 and 4 recite the limitation "pre-compressing device" in the claims.

There is insufficient antecedent basis for this limitation in the claim.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1-3 are rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Obergfell (US 3,850,359).

Obergfell discloses the invention as claimed including a combustion powered tool, combustion chamber 24, piston guide in the form of cylinder 26, piston 28, and an pre compression device in the form of a compressor 42, which supplies compressed air to the tool (see Figs. 1,4-6, C3,L1-18 and C6,L9-20).

Furthermore, while Obergfell does not disclose how the source of pressurized air is powered, the examiner takes Official notice that it is old and well known in the art to have a compressor that is powered by electricity for the purpose of supplying compressed air.

Claim Rejections - 35 USC § 103

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. Claims 4-6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Obergfell in view of Hirai et al (US 6,220,496).

Obergfell disclose the invention substantially as claimed except for a storage medium separate from the compressing means. However, Hirai teaches that it is old and well known in the art to provide a pressurized storage medium 20, which stores pressurized air, connected to the pre compression device by check valve 22 and a pressure valve 21, which regulates the pressure from the storage to the tool for the purpose of supplying a tool with a high pressure of air (see Fig.1 and C3,L42 – C4,L41). Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to have provided the invention of Obergfell with the separate storage means as taught by Hirai for the purpose of supplying a tool with a high pressure of air.

Conclusion

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Nakazato et al, Ohtsu et al, Dippold and Gakka et al have been cited to show devices having similar structure.
